

Press release for 20/08/2019

PoINT Storage Manager 6.4: More archiving flexibility for users

Siegen. Version 6.4 of the PoINT Storage Manager is available now. The focus for this latest release is the “User Controlled Archiving” function, which allows users to customise which data to archive and when. This makes it easier to maintain compliance and securely archive data.

Previously, the PoINT Storage Manager software had only given administrators the right to specify criteria and rules for automatically archiving data. This newly integrated function, “User Controlled Archiving”, is now also available to users as a Windows Explorer add-in. This makes archiving data just as easy as creating a copy of it, and eliminates the need to open another application or enter data in a separate interface.

The administrator specifies which users have the appropriate permissions to individually archive data and also determines which commands are available. This means that control over the archiving system as a whole is still centralised.

“User Controlled Archiving significantly expands the range of applications for our established software solution, the PoINT Storage Manager,” said Thomas Thalmann, CEO at PoINT Software & Systems GmbH. “Many of our customers have been asking for this new feature, which is now here for version 6.4.”
