**Professional Storage Management for SME: RNT Rausch and PoINT Software & Systems announce new partnership**

**Ettlingen/Siegen. The combination of Yowie Storage Appliances with PoINT Storage Manager is especially designed for the storage requirements of small and medium-sized enterprises. RNT Rausch and PoINT Software & Systems provide a professional solution for storage management and legally compliant archiving already from a capacity of 32 TB.**

"PoINT Storage Manager perfectly complements our Yowie storage appliances," says Sebastian Nölting, CEO RNT Rausch. "Even for smaller data volumes, we can now offer a powerful solution for storage optimization and archiving."

RNT Rausch offers individual server and storage solutions configured for the circumstances of its customers. The Yowie storage appliances were developed specifically for the needs of small and medium-sized enterprises looking for secure storage systems with data volumes up to 150 TB. Conventional storage solutions are designed to meet the requirements and data volumes of large enterprises. However, smaller businesses face the same challenges: Data must be archived in a legally compliant manner and reliably protected

from loss – all while data volumes continue to grow and the threat of cybercrime increases.

RNT Rausch Yowie storage appliances with pre-installed Cloudian HyperStore software are S3 compatible plug-and-play solutions. The compact appliances are quickly wired up and, thanks to the integrated installation wizard, can be up and running in no more than 30 minutes. The high-availability and high-performance storage systems are available from a capacity of 32 TB and are scalable up to 142 TB. This allows users to react flexibly to changing requirements.

With the tiering and archiving solution PoINT Storage Manager, Yowie storage systems are seamlessly integrated into existing infrastructures as archive storage. This now also offers companies with smaller data volumes the opportunity for sustainable storage optimization. Based on previously defined rules PoINT Storage Manager automatically moves inactive data to the archive storage. There, PoINT Storage Manager protects the data against premature deletion and against modification, so that the requirements of legally compliant archiving are met. By reducing the amount of data on the primary storage systems, the backup volume is reduced at the same time. Here, users benefit from considerable cost and time savings.

In the cooperation with RNT Rausch Sebastian Klee, Head of Sales & Marketing at PoINT Software & Systems, sees great advantages for a wide range of customers: "The new partnership with RNT Rausch makes our solution accessible to a new group of customers: We can, for example, also offer startups a cost-efficient solution for legally compliant archiving which helps them to reliably protect their data from the very beginning and which can flexibly grow with the companies and their requirements."

**About PoINT:**

PoINT Software & Systems GmbH is specialized in the development and distribution of software products for storage, management and archiving of data. Our data & storage management solutions offer an easy and efficient integration of different storage technologies and systems in consideration of enterprise requirements. PoINT products allow optimized usage of storage systems and help to reduce costs and issues caused by data growth. The software solutions fulfil compliance and archiving requirements and provide independence from storage technologies and vendors.
